

Procurement of automatic Frequency Restoration Reserve (aFRR) in Q1/2022 (weeks 1-13)

The Nordic TSOs have decided to increase the current aFRR procurement with 10 hours during weekends (hours 6-7 and 14-16) and 10 hours in weekday (hours 12-13) in Q1/2022. The total volume is approximately 300 MW in most hours and approximately 400 MW in morning hours during weekdays. In the late evening hours, the total volume down is also approximately 400 MW.

The basis for the procurement is the agreed goal for frequency quality level and the TSOs will continue to procure aFRR in hours where the system balancing is most challenging.

Starting from Monday 3 January 2022, aFRR will be procured as detailed below in Central European Time (CET):

aFRR - Proposed Nordic Volumes (MW) per hour - 2022-Q1																
			Monday		Tuesday		Wednesday		Thursday		Friday		Saturday		Sunday

Table: Detailed aFRR procurement scheme for Q1/2022.

The TSOs reassess the procurement scheme continuously based on the frequency quality and possible changes in the procurement scheme will be informed in advance.

Information about the procurement for Q2/2022 will follow in March 2022.

15 December 2021
